one file system

must™
multi use single technique

Features

- Durable against breakage with "TM-wire" heat treatment technology and flexible even in the most curved root canals.
- Sterile package provides safe use away from all contamination risks in first use.
- Must* (multi use single technique) multiple use at single file shaping technique.
- Minimally invasive shaping with taper angles of 0.04 and 0.06.
- 25.06 - 40.04 - 50.04 files with "S" cross-section-shape the root canal as needed with avoiding unnecessary material loss.
- Developed with innovative gliding approach, T-endo must "tg" Glide Path file offers quick and efficient reciprocating glide path experience.
- Shaping with single file grants you money and time saving.
- T-endo must has universal width, minimal tapers and trefoil silicone stoppers.

Content

- T-endo must reciprocal files in 4 pcs of blister package
- 4 pcs ISO coded colored silicon stopper
- User manual

Application

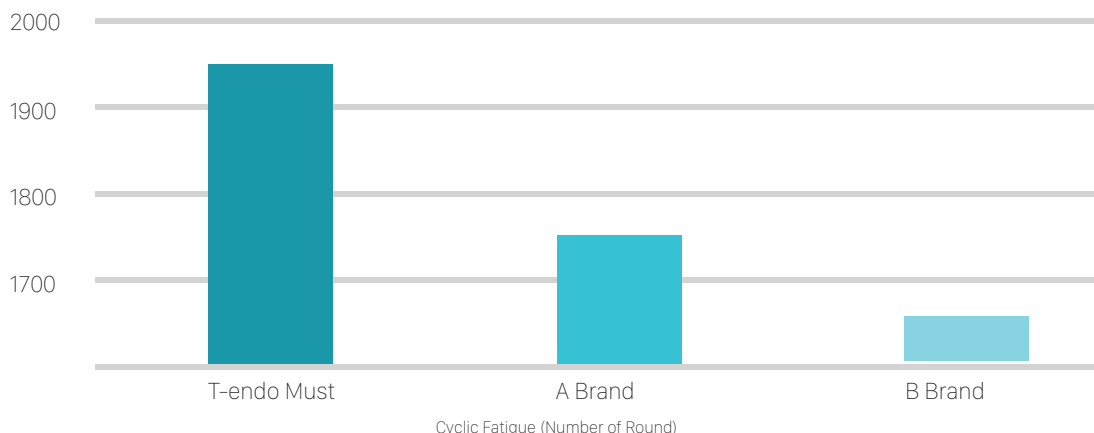

- Glide path should be formed with T-endo must tg files.
- T-endo must files should be used with 2mm up and down movements.
- T-endo must files should be provided to be squeezed in root canal and cut passively.
- T-endo must files should be renewed immediately when any deformation is seen on the files and should not be used in shaping again.
- During shaping process, when T-endo must files are removed from root canal, the root canals should be irrigated plenty of time.

minimally invasive shaping

Mis

Rotary NiTi Root Canal File

Tendo®
mis
rotary file system

Features

- Reliabe shaping.
- Thanks to the TM wire technology used for NiTi heat treatment, the instrument will follow the natural canal anatomy smoothly wich makes it safer, resistant to breakage and flexible even for curved root canals.
- Rectangle cross-section for higher cutting efficiency .
- Unique design for cutting edge ensures more debris removal.
- Sterilized package provides safe use away from all contamination.
- T-endo mis has universal width, minimal tapers and trefoil silicone stoppers.

Content

- T-endo Mis rotation files in 4 pcs of blister package
- 4 pcs ISO coded colored silicon stopper
- User manual

Application

- Orrificer file provides selective coronal widening.
- Glider file remove the irregularity to offer a glide path for the shaper and finisher files.
- Each file's stage with its effective increased taper allows more safety for next shaping stage.

Bioserra

Bioceramic root canal sealer

Features

- Bioceramic root canal sealer is used to seal after removal of infected pulp tissue from root canal
- Bioserra is in a flowable paste consistency and can be easily placed in root canal with single use tip and condenser agent.
- This product is polymerized slowly by absorbing the surrounding water.
- Aesthetic with white color.

Content

- 2g syringe
- 10 pcs single use tips

Application

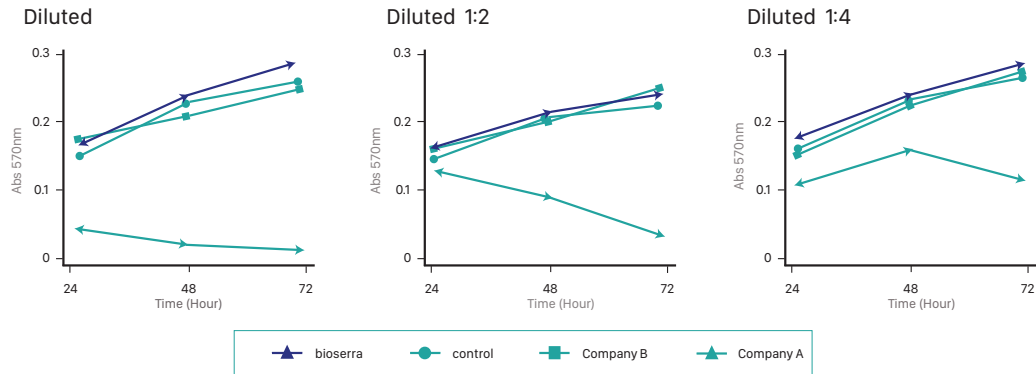

- Measure the length of root canal with suitable measuring device and file. Then, select suitable guttapercha master cone.
- Place one of the single use tips to syringe and move it to root canal.
- Push the syringe stick slowly to root canal in order to seal it and remove the syringe from the root canal slowly.
- Take care not to create bubbles.
- Do not squeeze strongly when injecting Bioserra as otherwise patient might feel pain.
- Place the Gutta Percha master point inside of the root canal.
- Cut the upper side of gutta with the help of dental cutter. Bioserra residue should be removed with cotton cloth or water impregnated cotton doloops.

Code	Product

DC11113	T-endo Bioserra Syringe 2gr.
---------	------------------------------

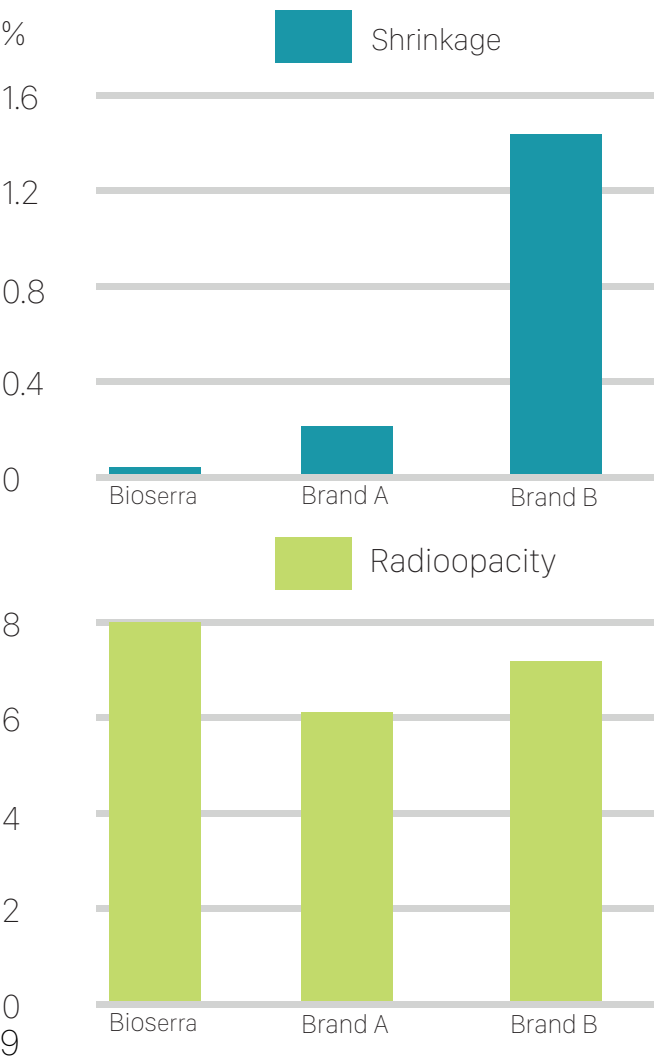

Bioserra

Bioceramic root canal sealer

Although the T-Endo bioserra PH (12.73) is high, it shows and proves that the cells multiply rapidly over time. Therefore, it is harmless to the human body and has excellent biocompatibility.

Tendo®

Sealart

Resin based root canal sealer

Features

- T-endo sealart is a paste formed epoxy resin based dual syringe that offers sealing.
- Rather than exceptional sealing and biocompatibility features, it also has magnificent physical and chemical features.
- It is easy to mix with dual syringe system.
- Does not cause staining over teeth.
- Does not dissolve in tissue liquids.
- Has exceptional biocompatibility
- Has great radioopacity
- Working Time : At 23°C (73°F), 35 minutes.
- Polymerization Time: At 37°C (99°F), 45 minutes.
- Can be used in all root canal techniques including basic and recent techniques.
- CE mark, this products is suitable in accordance 93/42/EEC Medical Devices Directives.
- *Suitable with Thermoplastic method and all condensation techniques.

Content

13,5 g syringe and mixing paper

Application

- Canal walls must be dry. Sealart should be carried to the canal with either lentulo spiral or obturation points (gutta percha, silver or titanium root canal points).
- To avoid the formation of air bubbles in the material and overfilling of the canal.
- Advance the lentulo spiral slowly to the apex running at very low speed. Withdraw lentulo very slowly still running at low speed.
- Dip the disinfected and dry master point into
- Sealart and with pumping motions slowly push it into the canals.
- Sealart is the endodontic product for every dental practice.
- It can be used for all established and more recent root canal sealing techniques. It is suitable for the single point method,
- Thermoplasticized method and all condensation techniques

Fillart

Hydraulic temporary restorative material

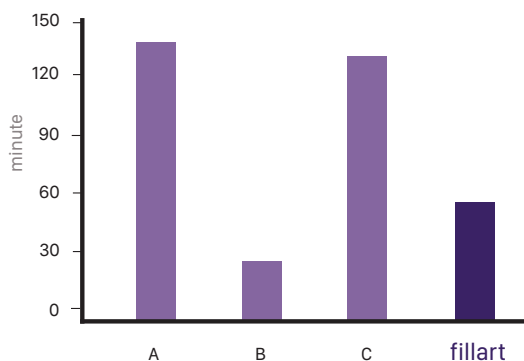

Features

- Applicable easily with hand instruments
- Quick polymerization in wet environment
- Provides better filling by expanding

Content

40 g jar

Freezing Time

Application

- Dry (Do not dry completely) previously prepared cavity with a help of cotton.
- Apply adequate amount of fillart to cavity with the help of suitable instrument
- In case of 1. Class cavity, make sure that there is not articulation by biting process. Then, shape the filling in suitable way to cavity wall.
- Wipe the excessive residue with a help of wet cotton by moving it to cavity sides.

PARION NanoHybrit Composite

“Dental art beyond era”

Parion

Nano Hybrid Restorative Composite

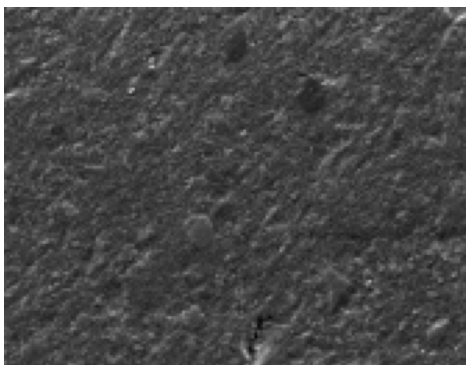

resto®

Features

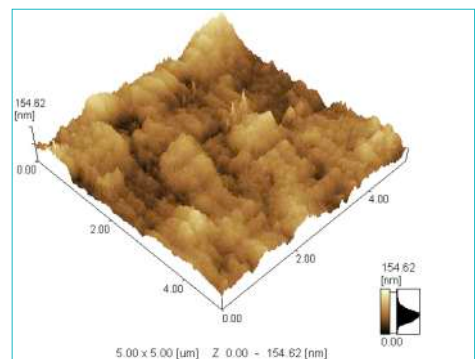

- Parion is the first %100 made in Turkey new generation composites with nano hybrid filling
- Having ultimate filling and micro hardness makes Parion composite separated from others.
- Makes difference in your treatments with easy manipulating feature in both posterior and anterior areas.
- Unique syringe design and the lid with opening one hand makes the product user friendly.
- It gives advantage to the user to get the desired amount of material with its specially designed chamber called bamboo opening.
- With 10 different shades compatible with Vita Scale (A1-A2-A3-A3.5-A4-B1-B2-C1-C2-I-UD)
- Offers extraordinary solutions in all layering process.

Triobond Universal

Composite Adhesive

resto®

triobond universal

Features

- Triobond is 7th generation dental adhesive that can be used with selective-etch, self-etch and total etch techniques
- Triobond can resist the strength composed during polymerization shrinkage and function.
- Can be used as bonding dry and wet surface.
- Thanks to film thickness, applied easily. The film, it is applied.
- No irritant affect against pulp.
- Specially designed bottle gives equal and single drops.
- Does not require etch during application, however, as present in other brands, using external etching increases connectivity in anterior applications.
- Can be used as total etch, self etch or selective etch.
- Applicable in indirect and direct restorations.
- With its perfect penetration in dentin tubes, removes post-operative sensitivity risks.

Micro Applicators

Bonding application brush

Features

Microbond applicators have been developed to be used in the application of cement, silane, conditioner and hemostatic solutions and in particular composite bonding and acid applications.

There are different tip sizes depending on the Application for different purposes and the application area and surface differences.

It is aimed to achieve the most ideal results within area of use and user comfort. Application tips offered flat in the standard and It is designed to be tiltable according to need.

Micro brushes have handles in different colors, taking into account the tips, so that they can be distinguished in the clinical environment.

Easy Matrix 2.0

Universal matrix system

Features

- Easy Matrix 2.1, with its recently developed new generation is a dental isolation matrix system designed for molar and premolar teeth with having two different heights.
- Easymatrix 2.1 allows you to make contacts more easily with its 5.0 mm (blue) and 6.3 mm (green) options.
- Can be used with rubberdam, rubberdam liquids or other isolation techniques.
- With its new generation, it offers you to create more durable and easier contacts.
- It is advised to use matrix with Easy Retainer for better results.

Articulating Paper

Occlusion control "I" & "U" Form 80 μ

Features

Special flexible paper material with a high coloring capability adapts to occlusal surfaces accurately. Thanks to its progressive structure, it enables to retain especially stressed contact points during occlusion.

The paper material with only 80μ thickness became waterproof material with hydrophilic waxes and pharmaceutical oils. One side of the paper is blue and the other side is red so that it enables to distinguish easily the stressed contact points either from lower jaw or upper jaw.

- User Friendly
- Waterproof

Impression Tray

Features

Impression trays designed for taking compact impression have different sizes and models. The trays designed to meet the needs of taking all kinds of impressions. The trays have been manufactured corrosion resistant stainless steel. The trays can be disinfected with suitable disinfectants and autoclavable in 135 °C.

Solid trays are also available for taking heavy viscosity impression, precise polyether and A Type silicones which are used with adhesives.

Other perforated models with increased grip are suitable for materials such as alginates, C-Type Silicones, A-Type Silicones.

- Compact Design
- Durable DC1000
- Autoclavable
- Sterilizable
