Founded in 2018 under the motto “Feel the Innovation” **Dentac** is committed to providing professional and innovative services to dental practitioners. By meticulously analyzing industry needs, **Dentac** combines high performance products with quality to offer comprehensive solutions that dental professionals can trust in their treatment processes.

With an extensive service network, **Dentac** operates effectively across Turkey, doubling its market share in a short period and strengthening its presence nationwide. Today, **Dentac** continues to grow globally, serving in 22 countries around the world.

Backed by a strong team, robust infrastructure, and a corporate organizational structure, **Dentac** empowers dental practitioners to deliver successful treatment solutions. Additionally, by integrating industry experience with educational programs, **Dentac** aims to add value to the profession.

www.**dentac**.com

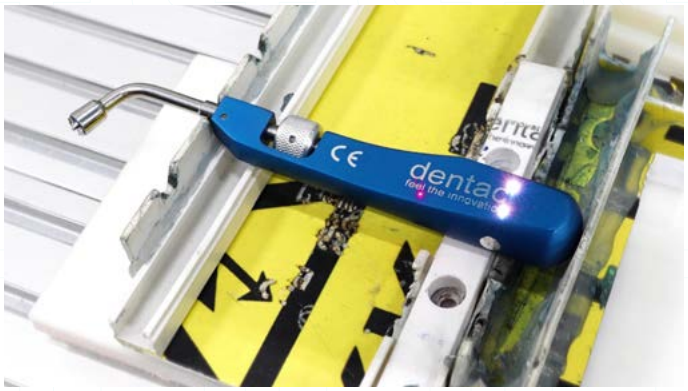

Our Mission

With our expertise in the dental sector, we design, manufacture, and provide top-tier services with high-tech products that align with our quality values. We strive to enhance our quality and service standards daily to deliver greater value to our customers.

Our Vision

We aim to be a continuously evolving company by thoroughly analyzing our customers' changing needs. Our goal is to strengthen our competitive edge globally by offering the most innovative solutions in the industry.

2018

The dentac brand was created under Öncü Dental.

2019

T-endo must Design work has been completed.

2020

Production Unit was established in Esenyurt location.

2021

In February, Turkey's first domestic composite fillings Parion, Myra and Pergamon started to be produced.

2021

In April, triobond, the 7th generation dental adhesive, was produced and put on sale.

2021

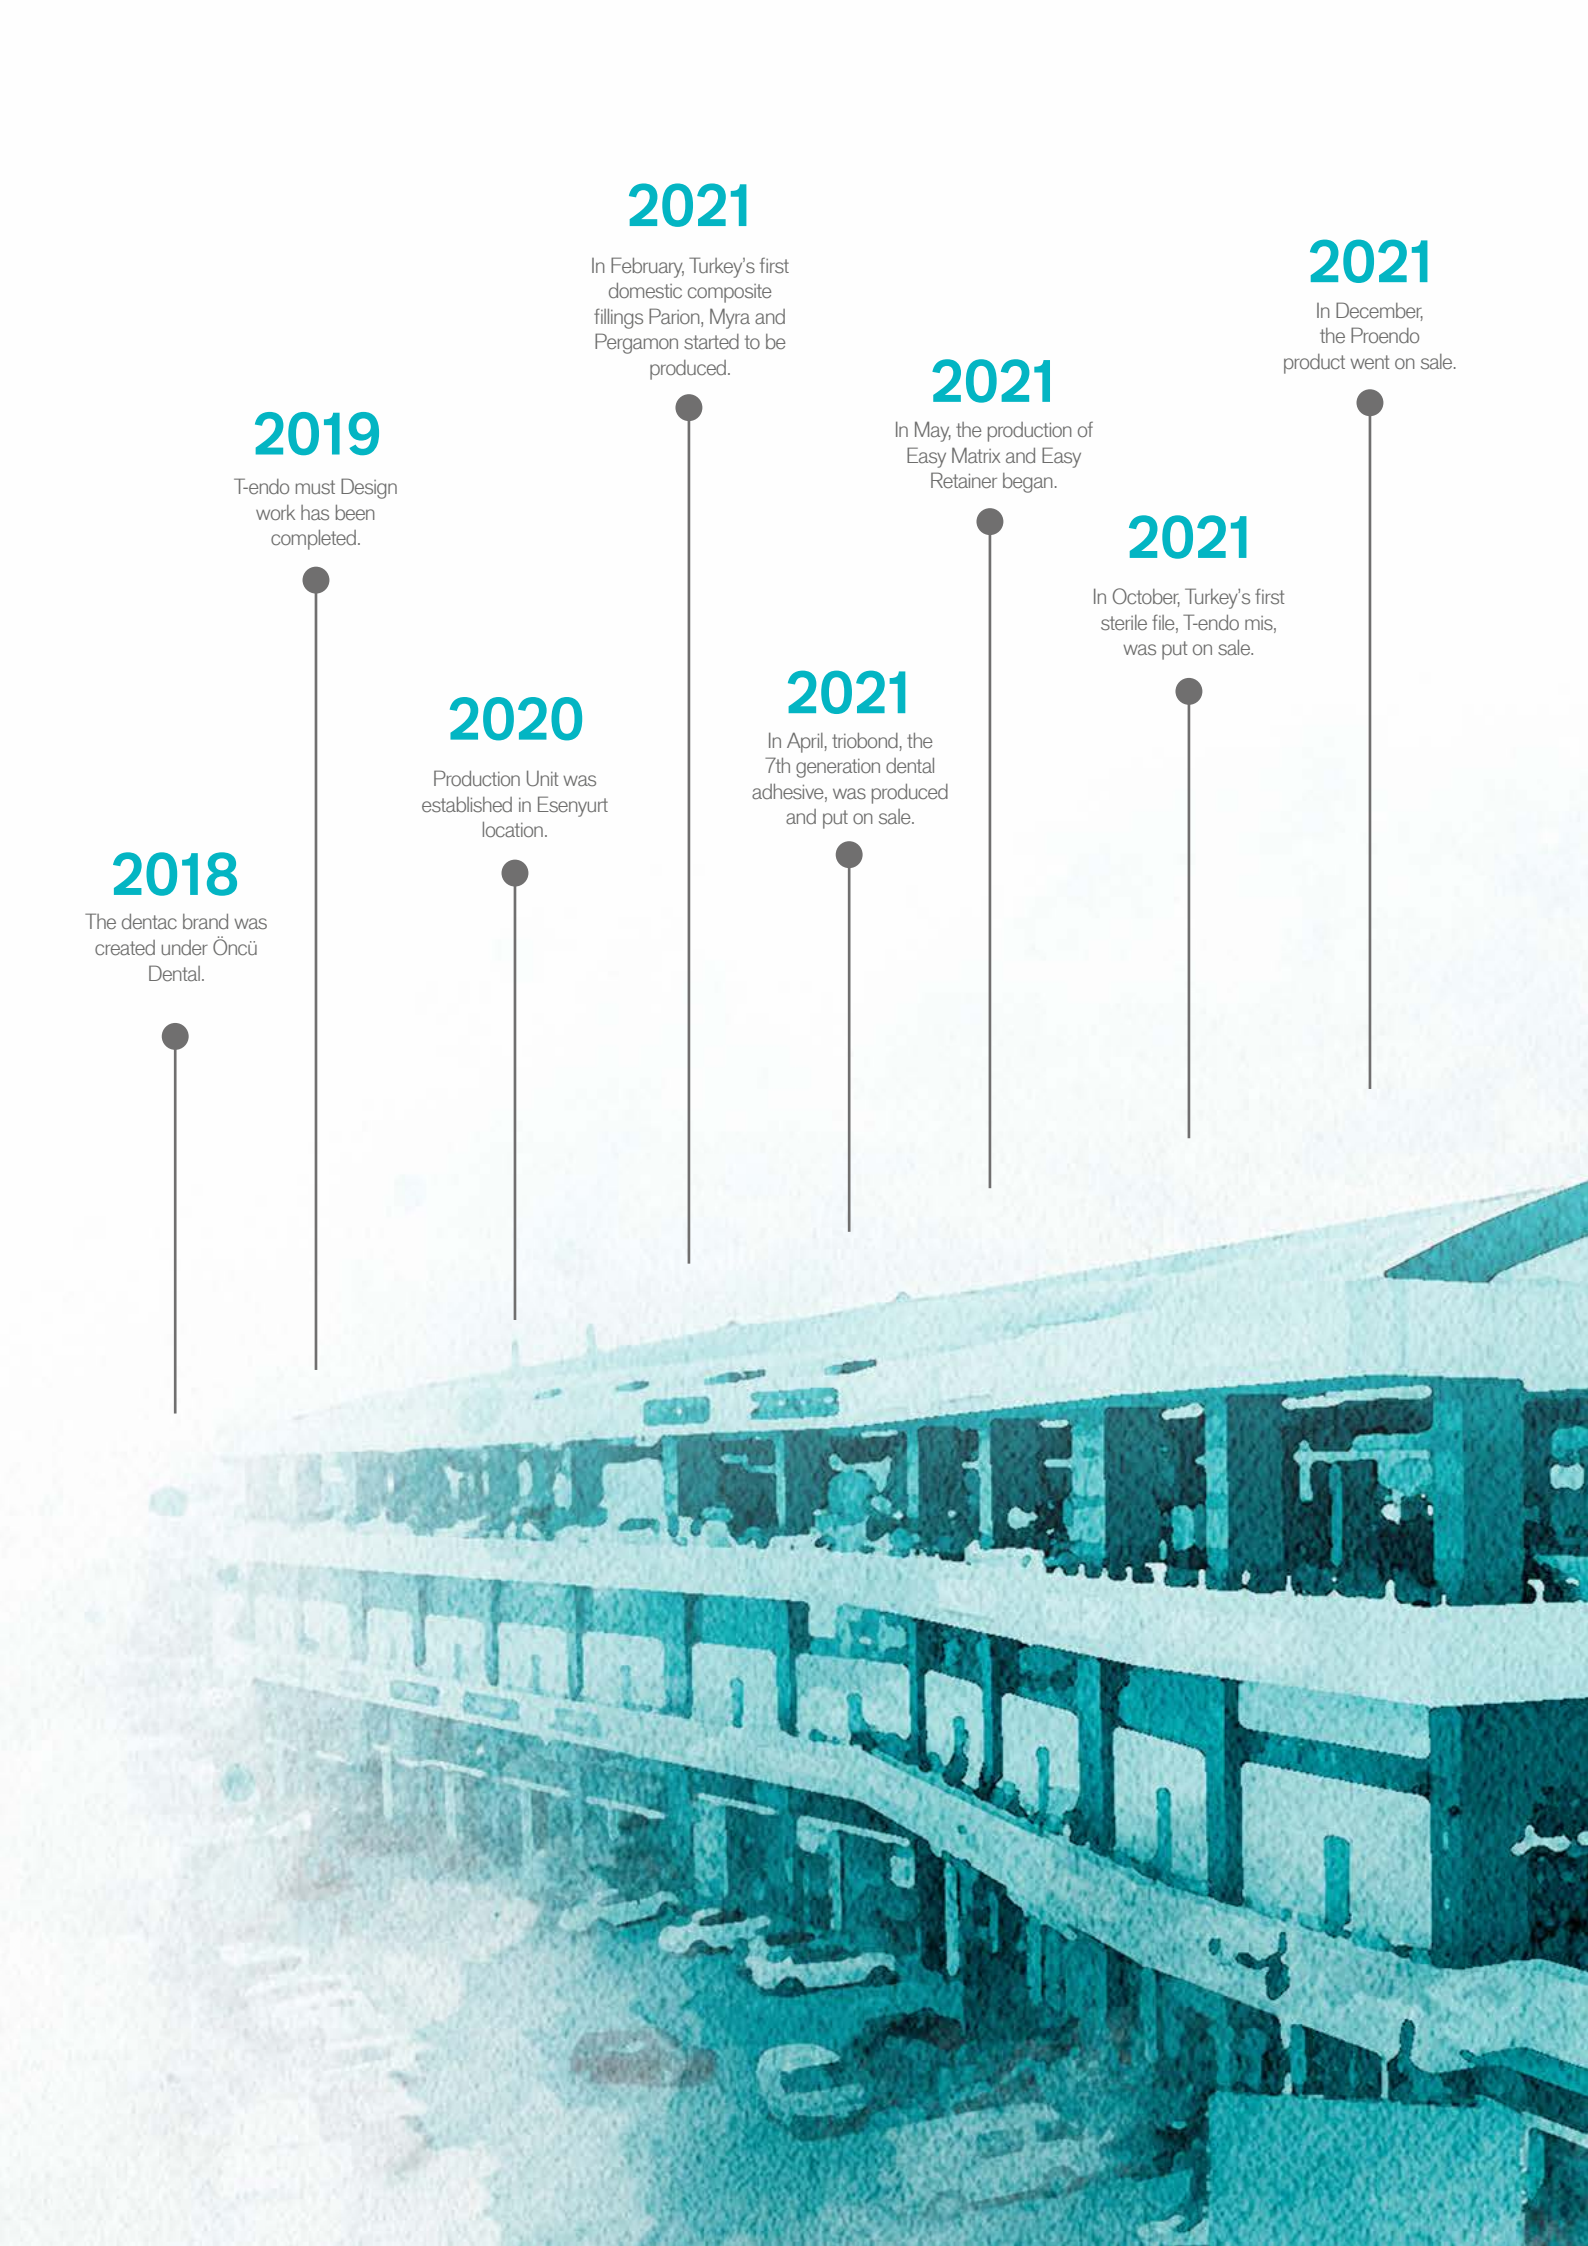

In May, the production of Easy Matrix and Easy Retainer began.

2021

In October, Turkey's first sterile file, T-endo mis, was put on sale.

2021

In December, the Proendo product went on sale.

2022

In February, Parion Flow fluid composite filler production started.

2022

In February, the Electronics R&D department was established with the aim of producing technological products with high added value.

2022

In September, the production of 80 Micron Articulation Paper started.

2022

In October, the production of 200 Micron Articulation Paper started.

2023

In July, the production of 100 Micron Articulation Paper started.

2023

In December, the production of 40 Micron Articulation Paper started.

2024

In May, the VEGA LED Polymerization Device was launched at IDEX and put on sale.

2025

In the current situation; within the factory, as of January With 45 personnel, a total of 321 different model products are produced in 30 main product groups.

Alpha

Endo Motor

“Always Ready for Endo with Alpha”

Designed for professionals seeking quality and reliability in dentistry, the Alpha Endo Motor delivers top-level performance in root canal treatments. With its innovative features and user-friendly design, Alpha facilitates your treatment processes while providing reassurance to your patients.

360 Rotatable Contra Head

2-in-1 Endo Motor

Root canal test alone; It can be shaped while measuring, Two-in-one motor for root testing, precise fit, efficient preparation.

Brushless Motor Technology

Ensures smooth operation with low heat generation, low vibration, and low noise. This allows you to work with high performance without disturbing your patients.

360° Rotating Contra-Angle

The rotating head enhances accessibility and offers flexibility, allowing you to work comfortably at various angles and positions during treatment.

High Speed and Torque

Achieves effective results with a cordless 6:1 reduction ratio. Thanks to high-speed and torque settings, it ensures excellent control even in complex root canals.

Technical Specifications

Feature	Description
Torque	0.4 - 5.0 Ncm
Speed Range	100 rpm - 1200 rpm
Contra-Angle Reduction Ratio	6:1
Power	3.7V / 1500 mAh Li-ion Battery
Piston Motion	Adjustable angle
Dynamic Control	Effectively prevents file breakage
Battery Capacity	Large capacity for uninterrupted operation
Motor Type	Brushless motor
Rotating Head	360° rotational capability
Application Area	Root canal treatments

Why Choose Alpha Endo Motor?

The Alpha Endo Motor elevates your dental treatments to the next level with its advanced technology. Its ergonomic design and powerful performance provide comfort during prolonged use. Compliant with medical standards, it offers dental professionals a superior treatment experience.

T-endo®

T-endo Must

Reciprocal NiTi Root Canal File

Multi Use Single Technique

T-endo must is a specially designed reciprocal NiTi root canal file that simplifies root canal shaping procedures in dentistry. With its single-file system, it allows for both shaping and cleaning processes, providing significant time and cost advantages for dental practitioners.

Easy Shaping with a Single File:
T-endo must offers the ability to shape the root canal easily with a single file system, simplifying complex procedures. Its user-friendly design ensures a fast and effective treatment process.

High Durability:
T-endo must offers up to three times more breakage resistance compared to rotary systems due to its durable construction. This feature enhances the safety of the practitioner's experience.

Sterile Blister Packaging:
The product comes in ready-to-use sterile blister packaging. No sterilization is required after opening the packaging for the first use, saving time and increasing patient safety.

TM-Wire Technology
Offering exceptional durability, T-endo must ensures a safe experience for dentists.

Time Savings:
The reciprocal system provides greater time savings compared to rotary systems. The high cutting efficiency of T-endo Must files allows for quicker completion of procedures.

Why Choose T-endo Must?

T-endo Must offers maximum shaping with a single file, saving time and delivering reliable results in root canal treatments. With its flexibility and durability, it provides precise shaping even in narrow and curved canals. Packaged in sterile blister packs and ready for immediate use, T-endo Must is the ideal choice for dentists seeking maximum efficiency with minimal dentin loss!

Clinical Case Experiences and Physician Comments

"An 18-year-old female patient presented with pain due to irreversible pulpitis; root canal treatment was completed in a single visit using T-Endo Must 25 and 40 files. Canal obturation was performed using the single-cone and cold lateral compaction technique. After gaining access to the canal with a stainless steel hand file, I used rotary files and encountered no difficulty in reaching the apical region."

"With its flexible and durable structure, it is a system I can safely use even in narrow and curved canals; thanks to the properties of its Ni-Ti alloy, it also allows for multiple uses. Easy to use—T-Endo Must is my new favorite file system."

T-endo®

T-endo Mis

Rotational NiTi Root Canal File

Sterile

Minimal Invasive

Rotation System

TM Wire Technology

Minimal Invasive Shaping

The T-endo Mis file system maximizes shaping while minimizing pericervical dentin loss. These files meticulously follow the natural canal anatomy, providing a safer and more fracture-resistant experience during procedures.

Maximum Shaping with Minimal Dentin Loss

The T-endo mis files are engineered to provide superior shaping capabilities while preserving the integrity of pericervical dentin. This approach enhances safety and reduces the risk of complications.

Enhanced Flexibility

Thanks to TM-Wire thermal processing technology, these files maintain cutting efficiency while providing flexibility even in the most curved root canals. This feature ensures consistent performance during delicate procedures.

Sterile Blister Packaging

The product comes in ready-to-use sterile blister packaging, offering ideal protection for both practitioners and patients. The packaging requires no additional sterilization, allowing for immediate use.

Pro endo Gold

Rotary NiTi Root Canal File

"Exceptional Flexibility from Start to Finish"

Proendo Gold, developed with TM-Wire heat treatment technology, features a universal 6-file system that ensures high fracture resistance. With superior cutting efficiency and progressive tapered design, it delivers outstanding performance, providing a reliable solution for root canal treatments. The product is packaged in a sterile blister for your and your patients' safety, ready for use without any need for sterilization.

Superior Flexibility:
Proendo Gold adapts perfectly to every canal shape, offering a seamless shaping and finishing process in root canal treatments.

High Fracture Resistance
Thanks to TM Wire heat treatment technology, Proendo Gold files exhibit exceptional durability against fractures, ensuring safe treatment.

Progressive Tapered Design
The design of Proendo Gold maximizes cutting efficiency while shaping root canals with precision and effectiveness.

Complete Solution
The design of Proendo Gold maximizes cutting efficiency while shaping root canals with precision and effectiveness.

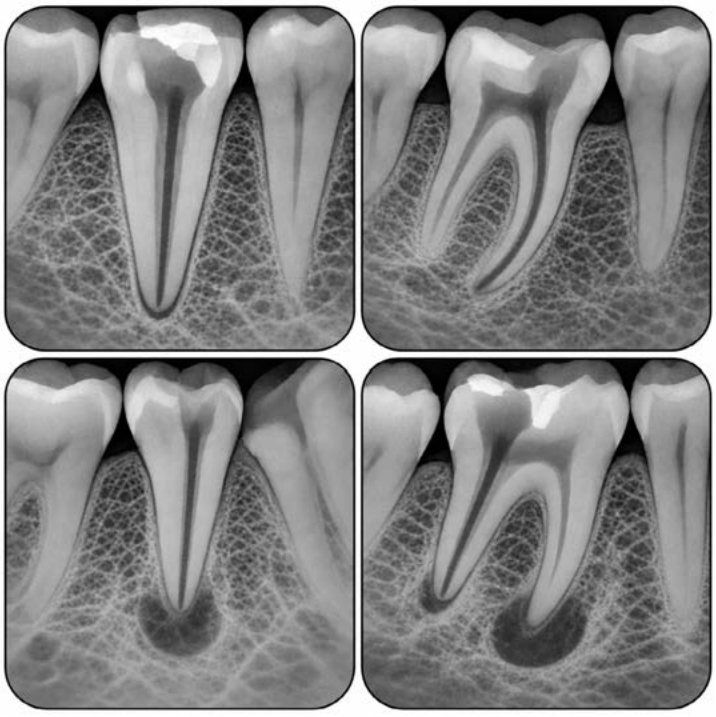

Sterile Packaging
Proendo Gold files are presented in sterile packaging, ready for immediate use.

Rotary System
Its rotary system allows for more controlled movement within the canal, enhancing cutting efficiency and yielding reliable results.

Q-Flex 4 Gold

Rotary Ni-Ti Canal File

"Gold Flexibility, Controlled Styling"

Developed with a fixed .04 taper design and TM-Wire heat-treatment technology, Gold Ni-Ti files are designed for the controlled preparation of root canals. Their flexible structure facilitates adaptation to the anatomy of curved canals while maintaining cutting efficiency. The characteristic gold color, resulting from the specialized heat-treatment process, complements the product's appearance.

TM-Wire Technology

The special heat treatment applied to the Ni-Ti alloy combines flexibility and cutting efficiency, delivering consistent performance during canal preparation.

Fixed .04 Taper

Constant taper throughout the working section helps shape the root canal in a regular and controlled manner.

High Flexibility

The flexible Ni-Ti structure helps the instrument conform to the natural path of the root canal, especially in curved canals.

Efficient Cutting Performance

Thanks to TM-Wire technology, it ensures effective shaping while maintaining its flexibility in curved canals.

Gold Structure

The characteristic Gold surface color, achieved through a special heat treatment, creates the distinctive appearance of the files.

Q-Flex 6 Gold

Rotary Ni-Ti Canal File

“Gold Flexibility, Controlled Styling”

Developed with a fixed .06 taper design and TM-Wire heat-treatment technology, Gold Ni-Ti files are designed for the controlled preparation of root canals. Their flexible structure facilitates adaptation to the anatomy of curved canals while maintaining cutting efficiency. The characteristic gold color, resulting from the specialized heat-treatment process, complements the product’s appearance.

TM-Wire Technology
The special heat treatment applied to the Ni-Ti alloy combines flexibility and cutting efficiency, delivering consistent performance during canal preparation.

Fixed .06 Taper
Constant taper throughout the working section helps shape the root canal in a regular and controlled manner.

High Flexibility
The flexible Ni-Ti structure helps the instrument conform to the natural path of the root canal, especially in curved canals.

Efficient Cutting Performance

M2 Gold

Reciprocal NiTi Root Canal File

“Controlled Shaping with Two Files”

With its two-file system operating via continuous rotary motion, M2 Gold offers a simple and easy-to-follow workflow for root canal preparation. The 25/.04 and 25/.06 files enable the gradual shaping of the canal. TM-Wire heat-treatment technology and a specialized cross-sectional design enhance flexibility, cutting efficiency, and debris removal.

Two-File System:
The system, consisting of two shaping files, offers a simple and straightforward usage sequence for canal preparation.

TM-Wire Technology:
The specially heat-treated Ni-Ti structure supports flexibility and consistent cutting performance in curved root canals.

Resistance to Cyclical Fatigue:
Heat treatment technology enhances resistance to repeated bending loads.

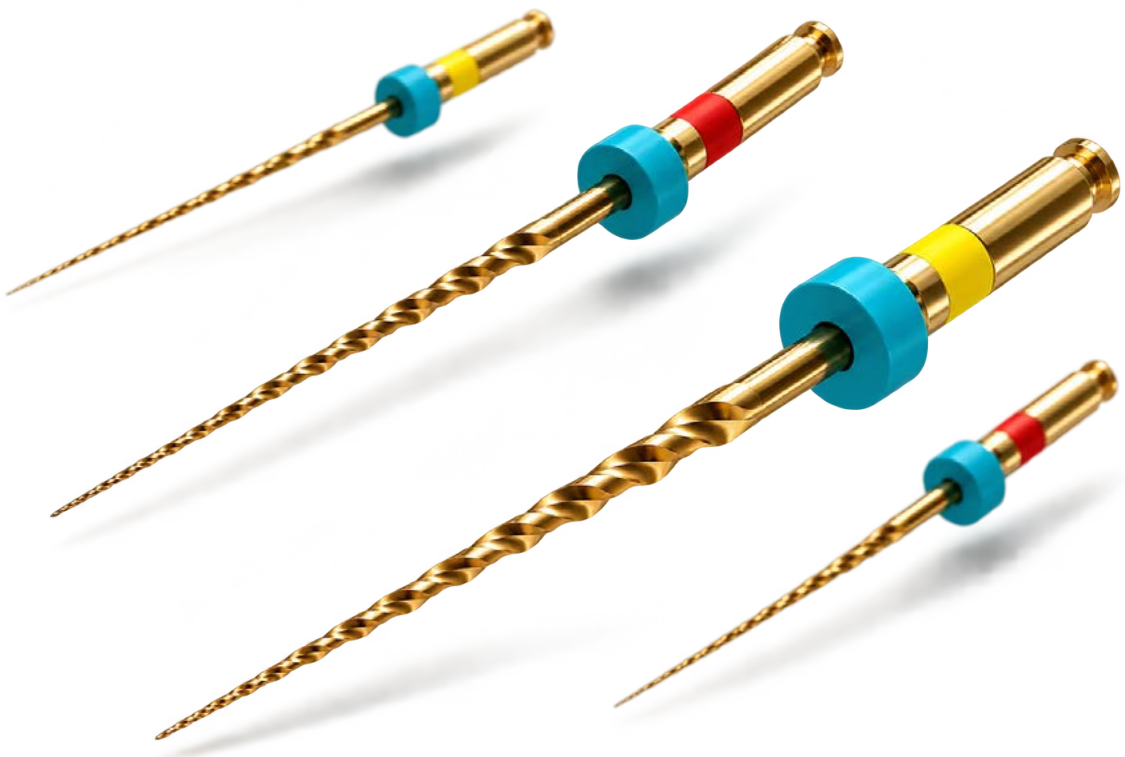

Efficient Cutting and Debris Removal:
The special cross-sectional geometry assists in shaping the canal and removing dentin chips generated during the procedure.

Two Different Taper Angles:
The 25/.04 and 25/.06 options enable progressive canal preparation with different tapers for the same tip diameter.

Continuous Rotation:
Operating with a continuous rotational motion, the system supports controlled shaping along the channel.

Tendo®

One File Gold

Rotary Ni-Ti Canal File

“Practical Shaping with a Single File”

One File Gold minimizes file changes and simplifies the procedural sequence by enabling root canal preparation with a single shaping file. Its 25/.06 design and continuous rotation motion facilitate controlled canal preparation. TM-Wire heat-treatment technology imparts flexibility to the Ni-Ti alloy, helping to maintain cutting efficiency in curved root canals.

Single-File Shaping:
Using a single shaping file after preparing the coronal canal reduces the need to change files during the procedure.

TM-Wire Technology:
The specially heat-treated Ni-Ti structure combines flexibility and cutting efficiency, delivering consistent working performance.

File Design:
The ISO 25 tip size and .06 taper are designed for the controlled enlargement and shaping of the canal.

Adaptation to Canal Anatomy:
Its flexible structure facilitates conformity to the natural path of curved root canals.

Continuous Rotation:
Operating with a continuous rotary motion, the system offers a simple and easy-to-follow forming process.

ReFlex Blue

Rotary Ni-Ti Canal File

"Flexibility Adapting to the Natural Form of the Canal"

ReFlex Blue is designed for the controlled preparation of curved root canals, featuring a flexible Ni-Ti structure. TM-Wire heat-treatment technology enhances both adaptability to canal anatomy and cutting efficiency. Its low tendency for shape memory (rebound) helps preserve the natural trajectory of the canal during shaping.

TM-Wire Technology:
The specially heat-treated Ni-Ti structure supports flexibility and consistent cutting performance in curved canals.

High Flexibility:
Its flexible structure facilitates the file's ability to follow canal curvatures and adapt to different canal anatomies.

Low Springback:
The file's low tendency to return to its straight shape facilitates controlled operation in curved canals.

Preservation of the Natural Channel Form:
Its structure, which facilitates the balanced preparation of canal walls, supports the preservation of the canal's natural path during shaping.

Different Diameters and Tapers:
The 20/.10, 15/.03, 20/.04, 25/.04, and 25/.06 options offer a selection of files suitable for different stages of canal preparation.

G3 Gold

Rotary Ni-Ti Canal File

“Gradual Preparation, Controlled Shaping”

G3 Gold is a rotary system that enables the step-by-step preparation of root canals using files of various diameters and tapers. TM-Wire heat-treatment technology imparts flexibility to the Ni-Ti structure, enhancing cutting efficiency in curved canals. Its design facilitates debris removal, ensuring effective performance during the shaping process.

TM-Wire Technology

The specially heat-treated Ni-Ti structure combines flexibility and cutting efficiency, delivering consistent working performance.

Stepwise Canal Preparation

The system, comprising various diameters and tapers, enables canal preparation to proceed in a controlled manner using files that complement one another.

Effective Debris Removal

The file design facilitates the removal of dentin chips generated during shaping from the canal.

Adaptability to Curved Canals

The flexible Ni-Ti structure helps follow canal curvatures and adapt to the canal anatomy.

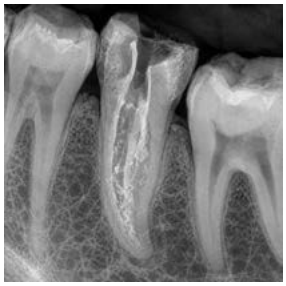

Wide Range of Diameters and Taper Options

The 20/.10, 16/.02, 19/.02, 20/.04, 25/.06, and 35/.04 options offer a selection of files suitable for different stages of canal preparation.

Bioserra

Bioceramic Root Canal Filling

3.5 Hours Freeze Time | 12 pH | 8mm Radiopacity | 23mm Fluidity | Biocompatible

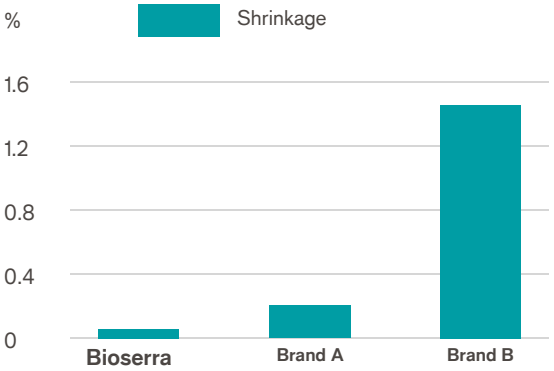

"High Flowability, Easy Application"

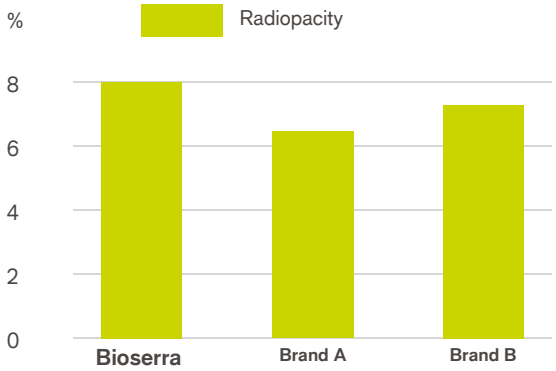

Bioserra provides an effective solution for root canal treatment with its calcium silicate component. This bioceramic filling material significantly contributes to healing by absorbing moisture from the surrounding tissues. It also induces a certain degree of crystallization of calcium hydroxide ($Ca(OH)_2$), resulting in the formation of CAH (Calcium Aluminate Hydrate) and CSH (Calcium Silicate Hydrate) gels.

- **Antimicrobial Effect:** The bioceramic filling offers effective protection against microorganisms.
- **High Biocompatibility:** It presents a structure compatible with body tissues, supporting the healing process.
- **Non-Toxic:** With high cell viability, it does not have toxic effects.

Bioserra is a flowable paste that can be easily applied to the root canal using a single-use tip and a densifying agent. Each package contains a 2g syringe and 10 single-use tips.
Bioserra is an ideal choice for dentists seeking a reliable and effective filling solution.

Product Code	Product Name
DC11113	Bioserra

Sealart

Resin-Based Root Canal Filling Paste

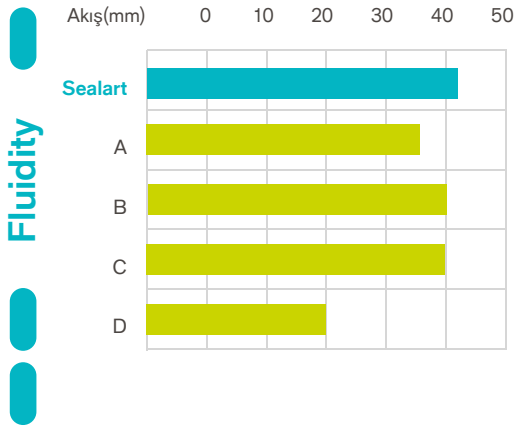

Biocompatible · Radyoopasite · Coloring It does not · Stabilite

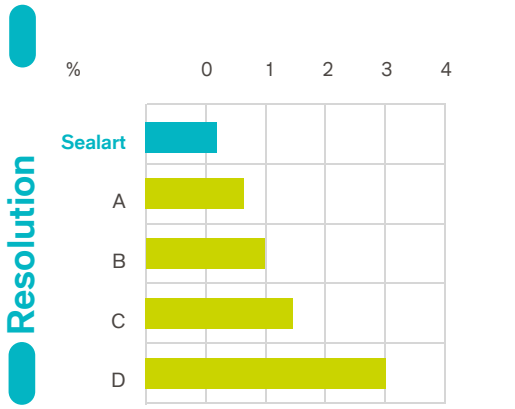

“Permanent Root Canal Filling”

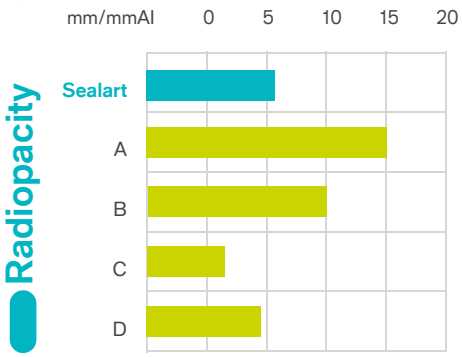

Sealart is an epoxy resin-based root canal filling material in a paste form, designed for reliable and long-lasting sealing. It offers superior leakage resistance, approved biocompatibility, and stable physical and chemical properties.

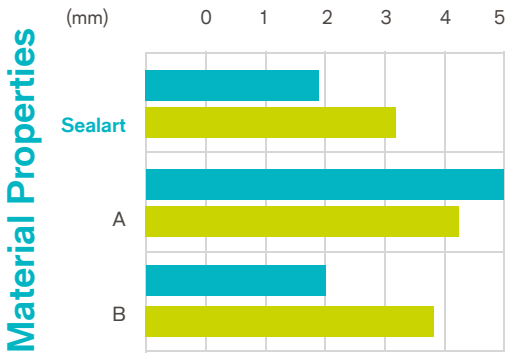

- **Easy Mixing:** The dual-syringe system facilitates straightforward mixing, ensuring a consistent application.
- **Exceptional Biocompatibility:** Sealart supports the healing process with its high compatibility with body tissues.
- **Radiopacity:** This feature allows for easy visualization during follow-up examinations.
- **Versatile Use:** Suitable for all root canal techniques, including fundamental and contemporary methods.

Product Code	Product Name
DC11112	Sealart

Tendo®

Fillart

Temporary Restorative Filling Material

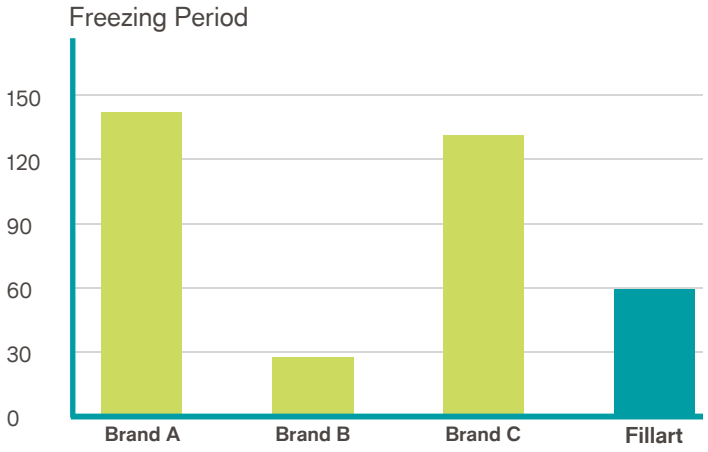

"Excellent Stability for Cavities"

Fillart is an exceptional temporary restorative filling material designed for optimal performance in cavity restorations. Its unique formulation ensures remarkable stability and effectiveness.

Key Features

- **Easy Application:** Can be effortlessly applied using hand instruments, making it user-friendly for dental professionals.
- **Rapid Polymerization:** Cures quickly even in moist environments, allowing for efficient workflow.
- **Improved Filling:** Expands slightly to ensure better adaptation and sealing within the cavity.
- **Generous Quantity:** Available in a 40-gram package, providing ample material for multiple applications.

Product Code	Product Name
DC11114	Fillart

Dental Dam

“Optimal Isolation with Easy Application”

Dental Dam is designed to provide excellent usability and maximum isolation during dental procedures. Its unique structure ensures effective barrier protection while being flexible and durable.

Key Features

- **Flexible and Durable:** Engineered for resilience, allowing it to adapt easily to various procedures without compromising effectiveness.
- **Variety of Thickness Options:** Available in different thicknesses to suit specific clinical needs and preferences.
- **Easy Application:** Simplifies the process of achieving isolation, making it an essential tool for any dental practice.
- **Powder-Free:** Ensures cleanliness and reduces the risk of contamination during use.

Choose Dental Dam for a reliable solution that enhances patient comfort and procedural efficiency in your dental practice.

Vega X

LED Polymerization Device

“Wider Light Area, Controlled Polymerization”

VEGA X combines VEGA’s advanced light-curing technology with a 10 mm lens diameter. While LSC (Light Stability Control) technology ensures consistent light output throughout the procedure, the expanded lens diameter offers a wider application area. Its durable aluminum body and ergonomic design make it well-suited for daily clinical use.

7 Operating Modes: It offers options suited to various application needs with Standard, Soft Start, Active Soft Start, Pulse, Ortho, Personal, and Library modes.

LSC Technology: Light Stability Control supports consistent light output during curing.

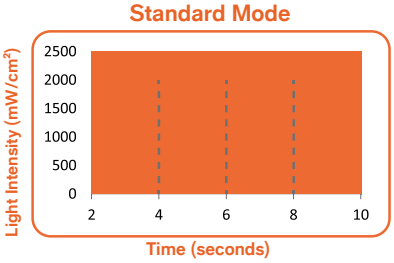

10 mm Lens Diameter: The lens diameter of 8 mm in the VEGA has been increased to 10 mm in the VEGA X, resulting in a wider light application area.

Broad-Spectrum Curing: It adapts to various curing needs with a avelength range of 385–515 nm and a light intensity of 800–3000 mW/cm².

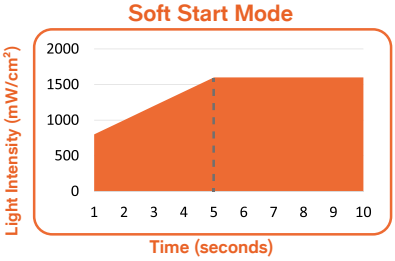

Durable Body: It offers a durable structure for clinical use, featuring an AL7070 aluminum body and IP65 water and dust protection.

Wireless Charging and Ergonomic Use: It offers practical use with its 2040 mAh rechargeable battery, wireless charging capability, motion sensor, and ambidextrous design.

Vega

LED Polymerization Device

Innovative Light-Curing Technology for Optimal Results

Vega is a cutting-edge LED light curing device featuring LSC (Light Stability Control) technology, ensuring precision and success in dental procedures.

7 Working Modes: Standard Mode,Soft Start Mode,Active Soft Start,Pulse Delay , Ortho, Personalized , and the unique Library Mode.

Durable Design: IP65 certified for water and dust resistance; impact-resistant AL7070 aluminum body.

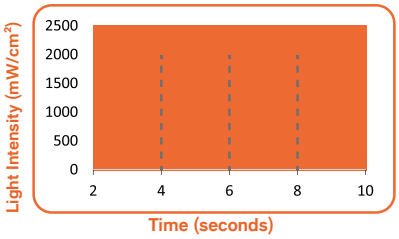

Wide Spectrum Curing: Cures effectively within 385-515 nm.

Powerful Battery: Rechargeable 2040 mAH battery; operates between 800-3000 mW/cm² for versatile applications.

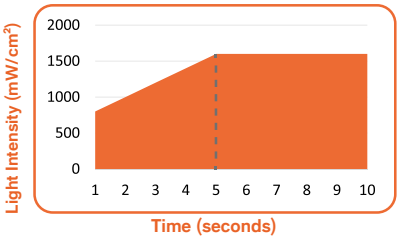

User-Friendly: Wireless charging, motion sensor for safety, and ergonomic for both right and left-handed use.

Why Choose Vega LED Curing Light?

Vega LED Curing Light delivers powerful and consistent light output for optimal polymerization in every dental procedure. With its lightweight design and ergonomic grip, it ensures ease of use and comfort for the practitioner. Vega's advanced LED technology guarantees quick and effective curing, enhancing efficiency and treatment success. It's the perfect solution for dentists who seek precision and reliability in every restoration!

Nova

LED Polymerization Device

Advanced Light-Curing Technology for Superior Clinical Performance

Nova is an advanced LED light-curing device designed to provide reliable and consistent polymerization across a wide range of dental applications.

Powered by LSC (Light Stability Control) technology for stable performance, along with a smart cooling system and ergonomic design, it ensures safe, efficient, and effortless use in every clinical procedure.

9 Operating Modes: Standard Mode, Soft-Start Mode, Active Soft-Start Mode, Pulse-Delay Mode, High Mode, Super Mode, Ortho Mode, SuperX Mode, OrthoX Mode

Wide Spectrum Curing: Operating within the 380-515 nm wavelength range, Nova ensures effective and homogeneous polymerization across all dental materials. Its multi-peak LED structure (405 nm, 440 nm, and 460 nm) enables optimal curing performance for different material compositions.

Suitable for All Clinical Applications: With light intensity up to 3200 mW/cm^2 and a broad wavelength range, Nova is suitable for both restorative and orthodontic procedures.

LSC (Light Stability Control) Technology: Maintains consistent light output even at low battery levels, ensuring reliable and stable performance with every use.

LCS (Light Cooling System) Technology: Regulates heat generated by high light intensity. Especially in orthodontic modes, it applies intermittent low-intensity light to ensure controlled and cooled curing.

360° Rotating Head: Provides easy access to all areas of the upper and lower jaw.

Wide Lens for Efficient Curing: The 10 mm lens diameter enables fast and homogeneous curing over wider surface areas.

Removable Battery for Continuous Use: Provides long-lasting use with a 1500 mAh Li-Ion battery; its removable design allows for uninterrupted operation with the use of a spare battery.

Nova

RED WHITE BLACK

Why Choose the NOVA LED Polymerization Device?

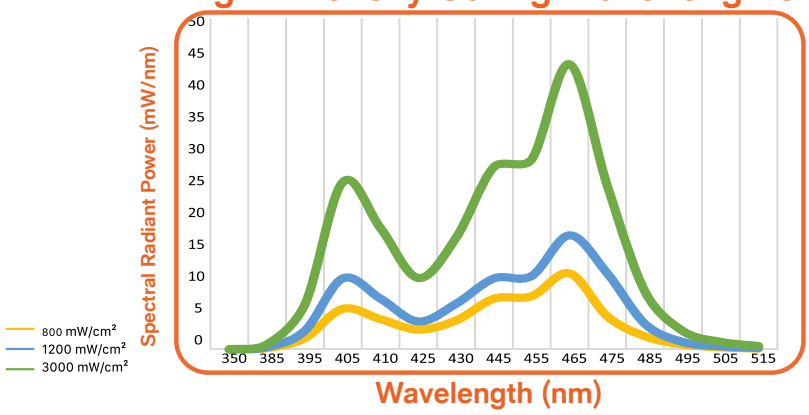

The NOVA LED Polymerization Device offers reliable and effective polymerization compatible with dental materials of varying compositions thanks to its broad-spectrum LED technology. Its lightweight and ergonomic de sign ensures comfort during extended use, while its user-friendly design simplifies clinical workflows.
It provides stable light output with its advanced LSC (Light Stability Control) technology, and ensures controlled and safe curing thanks to its LCS (Light Cooling System) feature.
With its 360° rotating head and multiple operating modes, NOVA adapts to different treatment needs and is an ideal solution offering both performance and accessibility.

DentaClear Quick

Bond Application Brush

“Rapid Cleaning, Controlled Polishing”

Dentaclear Quick is a prophylaxis paste developed for professional cleaning and polishing procedures. Its formula contains 40 µm abrasive particles that help remove surface stains and polish the tooth surface. While its desensitizing formula supports patient comfort, its specially designed consistency adheres to the tooth surface, helping reduce splatter during application.

40 µm

40 µm Abrasive Particles

40 µm abrasive particles aid in the removal of surface stains through mechanical cleaning and polishing action.

Fast and Effective Cleaning

Its formula, combining cleaning and polishing effects, facilitates a practical polishing process.

Helps Reduce Sensitivity

Its sensitivity-reducing properties support patient comfort during professional cleaning procedures.

Tooth Surface Adhesion Technology

Its special consistency ensures the paste stays in the application area and spreads in a controlled manner across the tooth surface, while minimizing splatter to provide a cleaner workspace.

Smooth and Glossy Appearance

The polishing action helps smooth the tooth surface and reveal its natural shine.

Turquoise Sensor

Sharper & More Stable

"High-Resolution Imaging"

The Turquoise Sensor offers exceptional clarity and stability with a theoretical resolution of 25 lp/mm. Featuring a leading 16-bit ADC chip, it provides over 60,000 shades of gray. With a high-resolution sensor of up to 2.2 million pixels, it enhances image quality, delivering superior detail and clarity in your digital radiography. The improved sharpness allows for easier detection of fine root apex bifurcations.

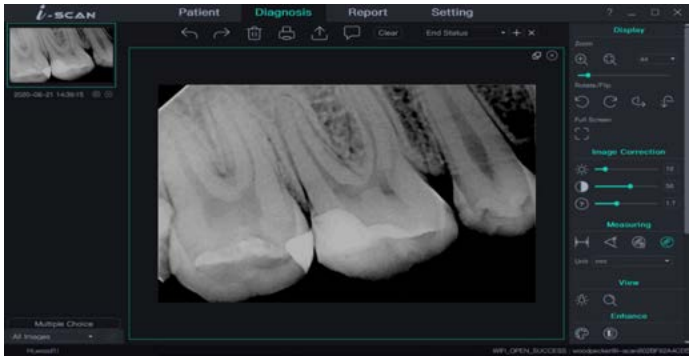

"User-Friendly Software Interface"

Intelligent and Robust Software
Designed to prevent any damage, the Turquoise Sensor is built with daily use in mind. Extensive bending tests have been conducted, ensuring reliability. The robust CNC surface, combined with ultrasonic welding technology, delivers an ultra-lightweight product experience. With IP68 protection, it is resistant to all types of disinfectant cleaning.
